Article 11

Drainage – Capital Improvements

Through a survey of town-wide drainage systems there are approximately 19 areas of town have been identified and evaluated requiring drainage improvements. There are two major type of project requests – swale maintenance and the construction of catch basins, drain pipes, and drain manholes.

This \$500,000.00 appropriation is requested to fund the design and permitting for swale repairs and drainage projects. Once the design and permitting phases are complete, an additional appropriation for construction will be requested.

The source of funding for this appropriation is a borrowing authorization.
